Projects

School Management System

A full-featured web application for managing students, teachers, and admins with authentication, RBAC (Role-Based Access Control), and automated class assignments. Includes event, fee, and exam management.

Hotel Booking App

A full-featured web application for booking hotels with secure authentication and user reviews. Allows users to search hotels, add comments, and view hotel locations on an interactive map. Includes a seamless booking process, user-friendly UI, and role-based access control (RBAC).

Online Food Delivery App (currently Working)

A real-time food ordering system using Socket.io for live order tracking, featuring authentication, RBAC, and a seamless ordering experience.
